

# CONFERENCE ON THE WEAPONIZATION OF THE ENVIRONMENT MAY 26TH 2023

## THE CONFERENCE

The conflict-environment relationship is multifold and often mutually reinforcing. **Green Conflict Studies** bridges multiple disciplines to look beyond simplistic causal associations between climate change and conflict. This conference brings together critical scholarship and empirical knowledge on the interlinkages between climate, the conflict lifecycle, and human society.

Thematically, the focus will be on various topics related to the conflict-environment nexus, including, but not limited to: environmental peacebuilding, activism, environmental governance (e.g. land grabbing), militarization, national security, and more.

## ATTEND?

**At the conference, researchers from various disciplines will have a unique opportunity to present and discuss their work. We appreciate interested individuals to attend and broaden their horizons.**

To attend, please register via:  
[weaponizationoftheenvironment2023.sites.uu.nl](https://weaponizationoftheenvironment2023.sites.uu.nl) or  
scan the QR code. Further information will follow!

## LOCATION & TIME

Academiegebouw, Domplein 29 Utrecht

Friday May 26th 2023, 10AM
